

KAEFER Group Environmental Policy

We take action for our environment

At KAEFER our core competence is in improving energy efficiency and extending the life-cycle of assets. In the process, we develop innovative ideas and provide all necessary resources to deliver our services in a resource-saving and energy-efficient manner. Environmental protection is where we come from – energy efficiency was the motivating factor behind the founding of our company. It forms the basis of our strategy and is continuously evident in the way that we think, act and work.

All KAEFER business units ensure adherence and contribute towards preventing and mitigating negative impacts and protecting the environment through their entire value chain. Our objective is to sustain our environment for the generations to come.

Climate change mitigation and adaption

KAEFER is committed to combatting global warming by reaching net zero in 2050 throughout the value chain. The company's greenhouse gas (GHG) emission reduction targets are in line with the Paris Agreement to limit global warming and have been validated by the Science-Based Target initiative (SBTi).

To adapt to climate change, KAEFER monitors climate change impacts on its own global business and value chain to minimise risks, build resilience and exploiting opportunities.

Sustainable resource use and pollution prevention

KAEFER is committed to observing and using natural resources efficiently and reduce underlying consumption such as energy and water. KAEFER ensures an economical use of materials, chemicals and products as well as a consequent ban of prohibited substances to prevent all kinds of pollution.

Waste management and transition to a circular economy

KAEFER supports the protection of ecosystems by consequently minimising waste through reducing, reuse and recycling with the aim to foster the transition to a circular economy.

How we manage our environmental impact

KAEFER's impact on the environment is continuously monitored to comply with all relevant environmental and climate legislation as well as other applicable standards such as ISO 14001. This includes double materiality assessments, proactive leadership at all management levels, as well as the development of a culture and awareness through employee involvement and consultation. Within our direct business activities, we continue to share our experience and expertise in energy efficiency with customers.

KAEFER has set itself measurable and ambitious targets and objectives and tracks performance through a group-wide reporting supported by clear rules and proper training. To enhance our performance, KAEFER is committed to analyse the effectiveness of rules, procedures and actions in line with its targets.

It is everyone's responsibility at KAEFER to work towards our commitments.
